

Is Virtualization for You?

Can your technology infrastructure benefit from virtualization? We at Bluebird Technologies have put together this questionnaire to help you decide:

1. Do you have multiple servers running on older hardware that would justify moving to a virtual environment on a more energy efficient system?
2. Do you plan to add additional servers to existing infrastructure?
3. Do you need a disaster recovery solution that will allow you to bring up a crashed server in a matter of hours or even minutes?
4. Do you need the ability to apply patches and perform upgrades where changes can be roll back quickly in the event of a malfunction?
5. Do you have applications that can't be run on newer operating systems?
6. Would the ability to dynamically allocate resources to different servers as needed without adding hardware be useful to you?
7. Does your IT budget allow for the purchase of new hardware, but lack when it comes to purchasing new operating systems or client access licenses?
8. Would reducing the energy costs required to power your infrastructure be beneficial?
9. Would running different operating systems including Linux, Windows and Netware on the same physical hardware interest you?

If you have answered "yes" to any of these, we can help! We have installed VMware and Hyper-V in many different types of organizational environments, as well as our very own headquarters office. Most importantly, we pride ourselves on utilizing the latest virtualization tools. Give us a call!
